After System 7.5 Update 2.0 Install, Can't Open Chooser (4/96)

Article Created: 22 April 1996

TOPIC ---

After installing System 7.5 Update 2.0, when I try to open the Chooser or the
AppleTalk control panel I get an error message that says AppleTalk Cannot Be
Opened. What is causing this?

DISCUSSION --

The resource for AppleTalk services are contained within the Shared Library
Manager files, located in the Extensions folder of the System Folder. For
AppleTalk services to function properly, both the Shared Library Manager and
Shared Library Manager PPC files must be present.

To install the Shared Library Manager files for your Power Macintosh computer,
double click the System 7.5 Update 2.0 Installer and choose the custom install
in the pop-up menu. In the custom install menu list, click on the arrow to the
left of the following:

Networking Software
Open Transport 1.1
Open Transport For PowerPC Only

Select Apple Shared Library Manager for PowerPC Macintosh by clicking the
checkbox to the left, then click Install.
