Article Last Updated:

TOPIC -----

We use Inter•Poll to get a list of all our AppleTalk zones on the network. We printed a list, generated another list, and we found that two zones were missing. Is there a utility available that will check the network, and give us a complete list, including the zones that are down?

DISCUSSION -----

If you want an automated network monitoring tool that specifically looks for zones that are missing or have been added without authorization, here are two applications that might help you:

- Network Vital Signs, from Dayna Communications
- NetWatchman, from Neon Software

On AppleLink, you can find contact information for the various vendors by clicking the Library Index button to view the folder structure in the Tech Info Library. An alphabetic listing of vendors is in the Third Party Company Directory folder.
