MacTCP: Invalid Address (3/94)

Article Created: 10 Mar 1994

TOPIC -----

Every time I manually enter an address in the MacTCP control panel, and then close the Control Panel, I get an error that the address is invalid.

DISCUSSION -----

First verify with your network administrator that the address you are using is indeed a valid address, and that there are no duplicate addresses on your network.

If your address is valid, make sure when you enter the address that no additional characters are accidentally added. Characters such as <Return> and <Ctrl> accidentally added after entering the address can cause this error.
