TokenTalk NB Card: Isn't Supported by Mac286, PC LAN Services

This article last reviewed: 11 October 1989

TOPIC -----

I have a Mac286 and a TokenTalk NB Card installed in a Macintosh IIx. Can I access typical PC LAN services, such as NETPRINT and NETUSE, or any other services that might typically be supported from PC LAN?

DISCUSSION -----

The Mac286 card has no means of communicating with the TokenTalk NB Card or other NuBus cards, in general. Also, the PC LAN software has not been written to support the TokenTalk NB Card -- especially since it is not a PC bus architecture card, much less an IBM product.
