TokenTalk NB Card: Connecting to a 16MB Token Ring Network

This article last reviewed: 12 October 1989

TOPIC ---

Is there any way to connect Apple's 4MB cards to a 16MB Token Ring using a PS/2
as a source router?

DISCUSSION --

Currently, there is only one way to connect a Macintosh II with the Apple
TokenTalk NB Card to a 16MB Token Ring network.

You must use an IBM-compatible computer with 16MB and 4MB Token Ring cards
installed as a bridge between the 4MB Token Ring network that the Macintosh II
is on and the 16MB Token Ring network. The PC needs to run IBM's Token Ring
Bridge Program and be dedicated to this bridging function. (This works because
we support source routing.)
