TokenTalk: Source-Level Routing

This article last reviewed: 18 January 1990

TOPIC --

Does you know what bridges/routers were used to test the IBM Source Routing
capability of the Apple TokenTalk NB Card? Were there any incompatibilities
with the AppleTalk Internet Router running in AppleTalk Phase 2 mode or with
the Upgrade Utility? Is there a version of Peek that supports the AppleTalk
Phase 2 and/or Token Ring LAP?

DISCUSSION ---

The source-level routing that was used to test the TokenTalk NB Card and
TokenTalk software was IBM's Token Ring Bridge Program running on a PC.
However, any product that provides source-level routing should work with
TokenTalk. There should be no compatibility problem with the Internet Router
and the Upgrade Utility.

LocalTalk Peek can be used with both AppleTalk Phase 1 and Phase 2 networks. We
are not aware of any TokenTalk Peek.
