SMB: AFE Window Shows Only 8 Entries

Article Created: 24 January 1991
Article Last Reviewed: 3 April 1991
Article Last Updated: 3 April 1991

TOPIC -----

Since updating our SMB file server with OS/2 LAN Server software v1.2 we've had a problem with Apple's SMB File Transfer (v1.0). With SMB File Transfer software we can log onto the server, display and transfer files; however, only the first eight entries (files or folders) for a particular directory are displayed.

DISCUSSION -----

What you have described is a known limitation of using SMB File Transfer with OS/2 LAN Server versions 1.2 or later. Alternatives include using third party products on the Macintosh such as MacLAN Connect from Miramar to access the OS/2 LAN Server. Otherwise, at this time you will be required to limit directories to no more than 8 items.

For more information on MacLAN Connect, go to the Tech Info Library and search under "Miramar".
