Apple Token Ring NB/c Card: Can't Change TR Address (9/94)

Article Created: 13 September 1994

TOPIC -----

Is there a way to see and/or change the token ring address on the Apple Token Ring NB/c card?

DISCUSSION -----

Because the Apple Token Ring NB/c card does not use the Token Ring control panel, there is no way to see the current default token ring address assigned to the card. There is also no way to change the token ring address or adjust the timer values.

The reason for this is that the NB/c card is intended for use on TokenTalk networks. With TokenTalk, there is no need to know or change the token ring address. The only way to determine the burned in token ring address for the card would be to examine a token ring line trace.

If a customer wants to be able to determine the token ring address from within the Macintosh, they must use the full size Apple 4/16 Token Ring NB card.
