Apple Token Ring NB/c Card: LED States (4/95)

Article Created: 7 April 1995

TOPIC ---

This article describes how to determine the state of the Token Ring NB/c card by
the state of the LED (light-emitting diode) on the card.

DISCUSSION ---

The LED on the Token Ring NB/c Card upon power-up or any type of reset, will
clear, indicating that the card is off-line. If the card is set for 16 Mbps
(megabits per second) and you have a good network connection, the LED will be
green. If the card is set for 4 Mbps, the LED will be yellow/orange. If the LED
is not on, or is not showing the correct color, check the guidelines for
handling common problems in "Troubleshooting" in the "Apple Token Ring NB/c Card
 User's Guide."
