ABS Tech Note: AS08 AppleSearch and The Power Macintosh (5/96)

Article Created: 23 June 1994
Article Reviewed/Updated: 24 May 1996

TOPIC ---

This technical note describes the AppleSearch 1.0.1 patch and where to get it.

DISCUSSION --

AppleSearch 1.0 as shipped does not run on the Power Macintosh. A patch is available that will update AppleSearch to 1.0.1. The only purpose of this patch is to add Power Macintosh compatibility.

This patch has been made available through AppleLink, on the Internet on the ftp.apple.com ftp server, the sumex-aim and University of Michigan software servers, and through the Apple Order Center for a shipping and handling fee.

The Tech Info Library article titled "Locating Vendor Information" can help you search for Apple Order Center's phone number.

Please note that users will likely see a performance reduction of up to 30% running AppleSearch servers on a Power Macintosh. This will be resolved when a native code version of AppleSearch is made available.
