## MacX 1.5: Open Transport and MacTCP Tool (7/96)

Article Created: 26 July 1996

TOPIC -----------------------------------------------------------

I am installing MacX 1.5 on a Power Macintosh running Open Transport. When I
launch MacX and try to remotely connect to an X system, I get this message, "The
remote command 'x' attempted to use connection tool 'MacTCP Tool', which does
not exist."

The MacX Read Me file says MacTCP Tool is not needed when using Open Transport.
What do I do?

DISCUSSION ------------------------------------------------------

The MacX Read Me file is not correct. When using Open Transport, MacX does
require the MacTCP Tool. You need to perform a MacX custom installation and
select the MacTCP Tool.
