AppleShare PC: No Support For Digital's DEC Network Card LC

This article last reviewed: 10 January 1991

TOPIC -----

Does Apple support Digital's DEC Etherworks LC card for the PC with AppleShare PC 2.0?

DISCUSSION -----

AppleShare PC can work with any network card that has an ODI (Open Data-Link Interface) compliant MLID. However, the only MLIDs we know of are those supplied with AppleShare PC. We haven't heard of anyone writing one for a DEC Ethernet card, although it could be done.

If you know of someone interested in developing an MLID for a specific card, information is available from APDA in the form of the Open Data-Link Interface Developer's Guide, part number M0355LL/A. This document details the specification, and provides example source code for a working driver. For more details, search the Technical Info library under "APDA." Copyright 1991 Apple Computer, Inc.
