AppleShare PC 1.1: New Features

This article last reviewed: 17 March 1989

The primary fix delivered in version 1.1 of AppleShare PC concerns
interrupt handling:

- In version 1.0, network devices had a tendency to randomly "disappear"
  from the network. The resolution of this issue was the main reason for
  creating version 1.1.

The other change to version 1.1 concerns international character sets:

- This change provides a method of mapping the MS-DOS international
  characters to the Macintosh OS international characters.

(NOTE: The current software, AppleShare PC 1.2, includes these
improvements.)
