## AppleShare PC: Selecting a Printer From Microsoft Windows

This article last reviewed: 18 January 1990

TOPIC -----

When I try to print to a LaserWriter from PageMaker on a DOS machine (using AppleShare PC 1.1), nothing happens.

Other than during installation of Microsoft Windows and in PageMaker (where you can choose from the printers that are defined in WIN.INI) is there any other place to define what kind of printer you are going to use?

DISCUSSION -----

When you first set up Microsoft Windows, you select the printer you'll use with your system. To change this selection, use the Add New Printer and Delete Printer commands from the Installation Menu in the Control Panel (run CONTROL.EXE from the MS-DOS Executive window).

Also, from the Setup Menu in the Control Panel, you can use the Printer command to specify a system default printer and set its output modes.

The system default printer is the printer that applications designed for Microsoft Windows will use. Printer output modes are printer-specific settings, such as Portrait versus Landscape, or color for plotters.
