TOPIC -----

I am currently using Motorola Models 3640 and 3840 mid-range computers. The PCs connected to them use a Wyse 60 terminal emulation package from Motorola. Motorola offers no support for the Macintosh. They also provide file server/printer server access for PCs, but not for Macintosh computers. I understand that Motorola bought Pacer software technologies to provide these services on the Macintosh.

I need to locate a vendor that offers the Wyse 60 tool to use with PacerTerm for Macintosh terminal emulation.

DISCUSSION -----

We are not aware of an available Wyse 60 tool that PacerTerm could support. Here are two alternatives:

- Wyse 60 Support within the PacerLink Software

PacerLink software (which is available now to OIR as a preferred customer) doesn't support Wyse 60 directly. Pacer engineers told us that many customers use the ADDS 60 option in place of Wyse 60, but it doesn't work in all instances. It's definitely worth trying.

- A Different Terminal Emulation Package that Supports Wyse 60

We realize that this may not be an alternative in your environment, but you may want to consider a different terminal emulation package which does support Wyse 60. Investigate Term from Century Software or MacEmulate from TLC.

On AppleLink, you can find contact information for the various vendors by clicking the Library Index button to view the folder structure in the Tech Info Library. An alphabetic listing of vendors is in the Third Party Company Directory folder.
