Article Last Updated:

TOPIC -----

Can the Macintosh emulate a Qume QVT101 terminal (a superset of VT100)?

When I use standard VT100 emulation on the Qume QVT101, I can't do some operations. The Qume QVT101 has some extra features on top of the normal VT100, and applications on the mini want to see the QVT100 and use those additional features.

DISCUSSION -----

We checked with Qume and found that the Qume QVT 101 emulated the Hazeltine 1500, TeleVideo 910 and Lear/Seigler 3A5 terminals. The Qume QVT 101 is an obsolete product.

MacEmulate from Cornerstone Data Systems emulates both the Hazeltine 1500 and the Televideo 910.

On AppleLink, you can find contact information for the various vendors by clicking the Library Index button to view the folder structure in the Tech Info Library. An alphabetic listing of vendors is in the Third Party Company Directory folder. Or search on "Cornerstone".
