Macintosh: Switched 56K Connection from MultiAccess

Article Created: 20 October 1992

TOPIC -----

Will the Apple ISDN card work with a Switched 56 leased line?

DISCUSSION -----

No. Switched 56 is a synchronous 56Kbps dial-up data link. It isn't ISDN.

A 56K card for the Macintosh is available from MultiAccess Computing Corporation. It offers Switched 56K connection. Here's some information on this card:

MCC-256 -- Switched 56K connection for the Macintosh

- Supports applications in Switched 56K Service as well as leased 56K (DDS) and fractions T1 at 192 Kbps
- V.35/RS-422 HDLC message encapsulation with error detection
- RS-366 or V.25 bis automatic dialing control
- RS-232 auxiliary port for disaster recovery or additional bandwidth
- Standard Apple NuBus form factor

To locate a vendor's address and phone numbers, use the vendor name as a search string.
