## ISDN and Macintosh (9/94)

Article Created: 4 January 1994

Article Reviewed/Updated: 27 September 1994

TOPIC -----

What ever happened to Apple's ISDN card? Is there any information available for using ISDN with a Macintosh?

DISCUSSION -----

Apple's ISDN NuBus Card is a discontinued product. The Apple ISDN card is also NOT ISDN-1 compliant.

We know of three solutions for Macintosh which are:

- 1) MacSnet NuBus Card distributed by OST, Inc.
- 2) Planet-ISDN NuBus Card by Access Privilege Products and distributed by Q.Sys International, Inc., and OST, Inc.
- 3) Hayes ISDN System Adapter which works in conjunction with Apple Remote Access MultiPort Server.

Alternatives are to use National ISDN-1 compliant routers like Cisco Systems, Wellfleet, Engage Communications, and others.

To locate a vendor's address and phone number, use the vendor name as a search string.

Article Change History:

27 Sep 1994 - Added the Hayes ISDN solution.
