LANStar PTE and PTE/S: Can Be Used Without Voice Features

This article last reviewed: 6 January 1987

Northern Telecom's LANStar can be used just for its LAN features, without any voice features installed.

Northern Telecom makes a smaller frame for the Packet Transport Equipment (PTE) called the PTE/S (S for "small") that can support only LAN functions, up to 112 nodes. The larger frame system can be configured with a variety of voice/data modules, or as LAN functions only.
