MAE 1.0: Window Resizing Problem And Workaround (4/96)

Article Created: 23 September 1994

Article Reviewed/Updated: 8 April 1996

TOPIC -----

For some time I've been having problems resizing my MAE window and I cannot think of what else to look for. Below are my environment variables. What am I missing?

```
gaea(55)%env
HOME=/home/admin/worsham
PATH=/usr/openwin/bin:/opt/SUNWspro/bin:/opt/SUNWwabi/bin:/opt/X11R5/bin:/opt
/apple/bin:/opt/ioffice/bin:/opt/tex/bin:/opt/ncar/bin:/bin:/usr/bin:/usr/sbi
n:/usr/ucb:/etc:/usr/lib/nis:/usr/ccs/bin:/usr/ccs/lib:/opt/bin:/usr/ucblib:.

```

DISCUSSION -----

The MAE 1.0 window resizing issue you've encountered was caused by the environment variable, TBFILIFORMAT, which you set to 1 in your environment variables. This, in turn, caused MAE to create two files, "Finder Preferences" and "Monitors.Preferences" in AppleDouble file format in the System\Folder/Preferences folder. The "Monitors.Preferences" file, in AppleDouble format, doesn't seem able to update the window size in the Finder properly. Without TBFILIFORMAT being set to 1, which is the default, MAE creates these two files in AppleSingle file format.

We were able to verified this. A SPR (Software Problem Report) will be submitted to MAE Engineering's attention.

We suggest the following to make window resizing work:

- 1) Login as your own account.
- 2) Do the command to unset the TBFILIFORMAT:

```
for CSH: unsetenv TBFILIFORMAT
for SH or KSH: unset TBFILIFORMAT
```

DO NOT set the TBFILIFORMAT environment variable to 1 in your .login or .profile file.

- 3) Go to your System\Folder/Preferences directory and remove the Finder and Monitors Preference files:

```
cd System\Folder/Preferences
rm Finder\ Preferences Monitors.Preferences
```

- 4) Launch mae and resize the window normally.
