## MAE 2.0: KeyAccess Is Compatible (3/95)

Article Created: 27 March 1995

TOPIC -----

Is KeyAccess compatible with MAE 2.0?

Can I hold the shift key down while launching MAE and get the same result (all extensions off) as holding the shift key down while restarting a Macintosh computer?

DISCUSSION -----

Yes, MAE 2.0 is compatible with KeyAccess which lets users access applications on a KeyServer.

No, holding the shift key down does NOT disable extensions while launching MAE. An alternative is to use either the `-noextensions` option on the mae command line, or the Extensions Manager in MAE 2.0 which turns extensions on or off.
