MAE: Multiple Ethernet Connects, Can't Select AppleTalk (1/96)

Article Created: 14 June 1995
Article Reviewed/Updated: 30 January 1996

TOPIC --

When opening the Network control panel, I get an alert box with the message "The AppleTalk Interface is not supported, please switch to LocalTalk." After saying OK, I see no interfaces in the Network control panel. How can I have MAE recognize a network interface card for use with AppleTalk?

DISCUSSION ---

The system currently has a network interface card other than le0 set as the default network. Therefore, MAE is unable to properly view the network interfaces available to the system.

To correct this, obtain Patch 2 from one of Apple Computer's internet sites:

• ftp.support.apple.com (130.43.6.3)
• www.mae.apple.com (17.255.216.51)

MAE 2.0.2 will support all network interfaces that support the dlpi framework.

Article Change History:
30 Jan 1996 - Updated article with MAE 2.0.2 from Patch 2.
