MAE 2.0: Error Code 1 on HP Installing STREAMS (8/95)

Article Created: 29 August 1995

TOPIC ---

I get an error code 1 on my Hewlett Packard (HP) workstation when trying to
build the kernel while installing STREAMS for MAE. Here is what is happening:

/bin/ld: Unsatisfied Symbols
hp_dlpi_intr_plabel (data)
hp_dlpi_wakeup)plabel (data)
error code 1.

DISCUSSION ---

Your workstation has an early version of HP-UX. When you upgraded to a newer
version of HP-UX, you updated, rather than do a complete installation. There are
two different versions of the liblan.a library that needed to exist in early
HP-UX 9.0. This was due to dlpi being released as part of STREAMS and STREAMS
was an ISU in 9.0.

The workaround, for STREAMS, is to break into a temporary shell during the 9.0
update, use vi on the dfile file to delete the "dlpi" line, and exit the
temporary shell to continue the update. At this point, the kernel should build
properly.

To get dlpi back into your system, you need to re-install the STREAMS-DLPI
fileset from the STREAMS' product tape. However, re-installation the whole
STREAMS product set would be beneficial.

NOTE: There is no way to break into a temporary shell to assist in updating the
AppleTalk Kernel Modules. There is no workaround, other than completely
installing a later version of HP-UX.

If you have additional questions, please contact Hewlett Packard directly. The
Tech Info Library article titled "Locating Vendor Information" can help you
search for a particular vendor's address and phone number.
