Cellular Modems from Cellabs

Article Created: 13 August 1991

Article Last Updated:

TOPIC -----

I would like to use my Macintosh Portable with a cellular phone in the car to access the network in the office. Any ideas?

DISCUSSION -----

Cellabs makes two products that allow you to access your office network using a cellular phone. Both products tie into an existing cellular phone between the handset and base unit.

- One product is Cellmodem 2400. If you don't have a modem, Cellmodem 2400 can provide both 2400 baud modem and Datajack capabilities in one unit.
- Another product, Datajack, allows a cellular phone to work with any internal/external modem you already have.

You can find the address and phone number for Cellabs in a separate article in the Tech Info Library.
