Express Modem 1.5.1: Default Profile of atN from 0 to 1 (4/94)

Article Created: 1 April 1994

TOPIC -----

One of the changes in Express Modem software from 1.1.2 to 1.5.1 was to change the default factory profile of atN value from 0 to 1.

DISCUSSION -----

The change of the default factory profile of atN value from 0 to 1 effects users who are using an S37 command. What this means is if you need to force connect at a speed less than 14.4, for example when calling America Online (AOL), you have to add "n0" (N-Zero) to your initialization string. The initialization string we have been using for AOL includes setting S37 to 6 to force the connection at 2400 bps. "n1" causes the modem to ignore the value in S37.
