TelePort/Bronze: GlobalFax Receive Software Install Fails-7/94

Article Created: 12 July 1994

TOPIC ---

I'm running the Installer for the GlobalFax Receive software and I get the
following message:

"The Installer needs more memory to perform an installation. Try quitting other
applications and running the Installer again. You can also try removing system
extensions (INITs) or lowering your RAM cache size and restarting to make more
memory available."

DISCUSSION ---

Unlocking the installation disk usually resolves this problem.
