Express Modem Does Not Support Faxing Gray Scale Images (11/94)

Article Created: 30 November 1994

TOPIC ---

I've noticed when I have a document on screen with several shades of gray, and I
Fax it using my Express Modem software, it results in a black and white image at
the receiving end. Darker shades of gray are replaced with black, and lighter
shades of gray are replaced with white. Doesn't the Express Modem software
support Faxing in gray scale?

DISCUSSION --

No, the Express Modem software does not support Faxing in gray scale.

If your document application supports dithering, which means converting each
shade of gray to a mixture of black and white dots, you can first save the image
as black and white, then Fax it. The appearance may not be as good as printing
the file to a printer that supports gray scale.
