TOPIC -----

This article describes installation tips for the Apple PCI Ethernet Card (10 MB/sec Ethernet Card-AAUI, Thin Coax, Twisted Pair).

I am installing an Apple PCI Ethernet Card (10 MB) in my Network Server 500. I am following the installation instructions for the software driver. SMIT keeps tellingme installation failed. How do I get this driver to install?

DISCUSSION -----

The manual discusses setting several settings in the SMIT screen. The driver for the PCI Ethernet card uses the driver from the 100TX card and the 100TX driver needs to be installed with the following steps. Switch the following two settings as shown:

- For the Automatically Install Requisite Software field, specify YES.
- For the Overwrite Same or New Versions field, specify NO.
