Network Server 500/700 & User Environment Variables (11/96)

Article Created: 22 Nov 1996

TOPIC ---

I am trying to set environment variables unique to each user on my Network
Server. I am modifying the ".profile" file for each user, but the file is never
run when I log into CDE (Common Desktop Environment) so none of the variables
are set in the graphical environment. However, if a user Telnet into the
machine, the variables are set.

DISCUSSION --

The environment variables for CDE are stored in the ".dtprofile" file. This file
is run whenever a user logs into CDE, and is stored in the users $home directory
(ksh environment). The ".profile" script is only used for shell logins, such as
Telnet or rlogin.
