## Quadra 630: Can't Run Applications from Netware Server (5/95)

Article Created: 27 September 1994

Article Reviewed/Updated: 23 May 1995

TOPIC -----

I'm running a Quadra 630 with a clean installation of System 7.1, and I can't launch some Macintosh applications residing on a Novell Netware server. When I try to launch an application I get a floating point error and the system crashes. Turning off the Cache control panel seems to fix this problem. What's wrong?

DISCUSSION -----

We recommend installing the latest system software, System 7.5 and System 7.5 Update version 1.0. We have not seen the issue you describe with this system software.

If you have System 7.1, we recommend installing System Update 3.0 which should take care of this issue also.

Article Change History:

23 May 1995 - Updated article for System 7.5 with Update version 1.0.
