## Macintosh Printing To Netware Queue For An Epson Printer (1/95)

Article Created: 18 January 1995

TOPIC -----

- 1) Can a Macintosh print to a Novell Netware queue that is configured for an Epson LQ-1050 or EX-1000 printer?
- 2) What are the steps necessary to do this?

DISCUSSION -----

- 1) Yes, it is possible to print to an Epson LQ-1050 or EX-1000 via a Novell Netware queue. In order to do this, you need a Macintosh driver for the printers. GDT SoftWorks currently sells a package called PowerPrint NW, which has the drivers needed for the printers you have asked about.
- 2) The PowerPrint NW package will go into details concerning setting up their drivers to work with Novell Netware. The general steps are as follows:
  - 1) Set up the printer and queue in Novell Netware as per the Novell Netware documentation.
  - 2) Add the following line to the "atps.cfg" printer configuration file: -o "Queue\_Name" -wb (where "Queue\_Name" is the name of the queue you want the Macintosh to print to").

Again, the documentation for the PowerPrint NW will tell you how to set up their drivers. To locate a vendor's address and phone number, use the vendor name as a search string.
