Macintosh Clients and Novell Frame Types (9/95)

Article Created: 19 September 1995

TOPIC --

What frame type is used by Macintosh computers interacting with a Novell Netware
server using AppleTalk?

DISCUSSION ---

Novell Netware servers support four different frame types for Ethernet cards.
These frame types and their associated protocols are as follows:

Begin_Table

```
Frame Type          Protocols
----------          ---------
EtherNet_802.2      IPX/SPX, and FTAM
Ethernet_802.3      IPX/SPX
Ethernet_II         IPX/SPX, TCP/IP, and AppleTalk Phase I
Ethernet_SNAP       IPX/SPX, TCP/IP, and AppleTalk Phase II
```

End_Table

Except in rare cases where AppleTalk Phase I is still in use, Netware
administrators will want to bind Ethernet_SNAP to the server's Ethernet card
servicing Macintosh clients.
