AppleLine Cables: How to get and fit them

The need AppleLine cables has finally been met (if you don't mind the AppleLine under your Macintosh Plus or Macintosh SE) by Product A9M0333, the Apple IIGS Adapter Cable.

The Adapter Cable is a female DB-25 with a circular 8 on one end. The only drawback is the cable's length (about 8 inches). Removing the screw and nuts from the cable lets it fit fully into AppleLine's unusual male plug, eliminating the need for a gender bender.

If the cable length is a problem, then Product A9C0314, the Apple II Printer - 8 Cable (smoke), is the answer. It has a male DB-25 (requiring the gender bender) along with the circular 8.

Note: While AppleLine is, logically, located on the Macintosh price list, both of the above cables are listed only on the Apple II price list. You will have to refer to both price lists when ordering this equipment.
