Power Macintosh: LAT Random Disconnect Problem Fix (5/95)

Article Created: 29 November 1994
Article Reviewed/Updated: 11 May 1995

TOPIC ---

Several people have asked about a problem related to running the LAT Connection
Tool on a Power Macintosh and AV computers. The configuration is normally a
Power Macintosh running an application that has selected the LAT Connection
Tool. The LAT session will disconnect itself randomly.

DISCUSSION ---

The Network Software Installer (NSI) 1.5 will fix this problem, and you should
find and install NSI 1.5.

These articles can help you locate NSI 1.5 mentioned here:

• "Where To Find Apple Software Updates" -- Lists online services for free Apple
software updates.

• "Obtaining Apple Product Support in the USA" -- Lists 800 numbers and online
services for software updates, Apple support information, and a subset of the
Apple Tech Info Library.

The Read Me does not specifically state this fixes the Power Macintosh and LAT
problem, however it does.

Article change History:
11 May 1995 - Updated article for NSI 1.5.
