SNA•ps Print and Postscript (1/94)

Article Created: 12 January 1994

TOPIC ---

Is there anyway to print a PostScript document from a mainframe to a
LaserWriter through the SNA•ps printer client? If so, what special
configurations are needed on the mainframe, SNA•ps gateway, and SNA•ps
printer client for this to work?

DISCUSSION --

SNA•ps Print emulates an IBM 3287 or 3812 printer which supports LU3 (3270
data streams) or LU1 (SCS data streams) only. AS/400 printing is done only
with LU1. The emulation is expecting to decode data (text only) within one
of the mentioned data stream formats.

Therefore, SNA•ps Print is not a solution for printing Host based
Postscript documents.
