TOPIC ---

I am running AppleShare PC 2.0.1 and a 3Com Etherlink II Board (ThinWire)
on an AST 486. When I load ABOTH, I can only see Phase 2 Zones, because
our K-Boxes are filtering out Phase 2 traffic. Is there any way I can see
our Phase 1 zones the same way I can on my Macintosh using the old
EtherTalk Phase 1 drivers? I don't know when we plan to migrate to Phase 2.

DISCUSSION --

You need AppleTalk Phase 2 for AppleShare PC 2.0 environments using
Ethernet or Token Ring networks. If you could attach to a LocalTalk
network, then you could use Phase 1. Otherwise, upgrade your present
network to Phase 2 as soon as possible.
