3270 Terminal Emulator with Netware Gateway (10/94)

Article Created: 25 October 1994

TOPIC ---

I am looking for a 3270 terminal emulator with the following features:

• Functionally equivalence.
• A nice interface and bug free.
• Support for Netware SAA 1.3 gateway (not the SNA•ps Gateway).
• Support for APA graphics.

Plus the other standard features such as keyboard remapping, light pen support, IND$FILE Xfer.

DISCUSSION ---

We have found two software packages that may be of interest. To be sure, we suggest calling the companies to verify the software package will do what you want.

A good resource is Redgate's, "Macintosh Product Registry," to research solutions.

The following companies may have software that meets your requirements. To locate a vendor's address and phone number, use the vendor name as a search string.

• Attachmate Corp. in Bellevue, Washington.

• Wall Data, Inc. in Kirkland, Washington.
