Macintosh-to-VME Connectivity Solution

This article last reviewed: 13 September 1989

TOPIC -----

Here is one solution for Macintosh-to-VME connectivity.

DISCUSSION -----

A company in Holland advertises a direct connection from the Macintosh II family to a VME bus.

The company, Bergoz, makes an interface called MacVEE, which consists of a NuBus card with DMA and a connection through a flat cable to a VME and CAMAC subrack. The cable can be up to 100 meters. (The MacVEE product was developed at the European CERN, a large research institute based in Geneva.)

For more information, contact Bergoz or CERN.
