PowerShare: Installing a Server (9/93)

Article Created: 28 September 1993

TOPIC ---

This article describes how to install a PowerShare Server.

DISCUSSION --

1) Install PowerShare. Launch the installer from the PowerShare CD-ROM
   or set of floppy disks. Use the default Easy Install selection when
   installing PowerShare.

2) After the installation is complete, restart the Macintosh.

3) Run PowerShare Easy Setup. The installation process installs an alias
   to the PowerShare Easy Setup application in the Startup Items folder
   inside the System Folder. Upon restart, the PowerShare Easy Setup
   application will launch.

4) In the PowerShare Easy Setup application, click the New button.

5) A dialog box appears, asking whether this is a new PowerShare system or
   an existing one. Click the New button.

6) You will be prompted to type a name for this PowerShare system and a
   password for the Administrator. Type in the inforamtion and click the
   OK button.

(Note: the PowerShare System Administrator name cannot be changed.)

7) Wait for PowerShare to start. You will see a series of dialog boxes
    informing you that the PowerShare Catalog Server is starting and then
    that the PowerShare Mail Server is starting.

8) Confirm that the servers are running. At this point, the PowerShare
   Catalog Server and the PowerShare Mail Server should be running. Each
   server will display a separate server status window.
