## PowerShare Server: PowerShare Admin (9/93)

Article Created: 28 September 1993

TOPIC -----

This article describes the functionality of the PowerShare Admin application.

DISCUSSION -----

The PowerShare Admin application provided with the PowerShare Server product package is a utility that the system administrator can use to monitor and manage the workings of a PowerShare System. The system administrator will use PowerShare Admin to:

- monitor and manage the operations of PowerShare System servers and gateways.
- manage the catalog containing folders and records.

The PowerShare Admin application provides two modes of operation: Monitor mode and Manage mode. In Monitor mode, you can view a listing of servers on the PowerShare System. When running in this mode, PowerShare Admin can be set up in a public location where users can observe the operations of the PowerShare System.

When PowerShare Admin is in Manage mode, an administrator can use the application to manage all aspects of the System, including the catalog and individual records.

Note: The PowerShare Admin will not run on a Macintosh on which the PowerTalk software has been turned off in the PowerTalk control panel.
