## AOCE: PowerShare Catalog Server Administration (10/93)

Article Created: 4 October 1993

TOPIC -----

This article describes PowerShare Catalog Server Administration of the Apple Open Collaborative Environment (AOCE).

DISCUSSION -----

PowerShare Catalogs are created and maintained using an application called the PowerShare System Manager's Utility. This utility can be run locally or from a remote location. The PowerShare Catalog Servers serving a particular PowerShare Catalog can be physically located in a phone closet or other secure location while administration happens remotely. Remote administration does not create a security breach since all communication between the Admin application and the PowerShare Catalog Server is encrypted with ASDSP. Any packets tapped from the wire would be encrypted. Copyright 1993, Apple Computer, Inc.
