Personal Catalog Icon Grayed Out In Apple Mail (6/94)

```
Article Created: 13 June 1994

TOPIC ---------------------------------------------------------

When in Apple Mail, I want to select the Personal Catalog Icon from "recipients"
selections, the first icon (personal catalog) is grayed out so I cannot select
it.  What's the problem?

DISCUSSION ----------------------------------------------------

Use the "get info" command on the personal catalog you want, then select "set
preferred".  After this is done the first time, the personal catalog option
should be available when addressing mail in any AOCE savvy application like
Apple Mail.
