PowerTalk: Duplicate Keychains (12/94)

```
Article Created: 6 October 1994
Article Reviewed/Updated: 14 December 1994

TOPIC -----------------------------------------------------------

When I delete PowerTalk Setup Preferences and restart my Macintosh, I end up
having duplicate PowerTalk Keychains on the desktop.

DISCUSSION ------------------------------------------------------

This arises when the PowerTalk Keychain has been renamed.  Deleting the
PowerTalk Setup Preferences file (which contains stored information on the key
chain, preferred personal catalog, I'm at, PMSAMs, and a part of the Mailbox
preferences), and restarting forces creation of a new PowerTalk Keychain.
Normally this means replacement of the pre-existing desktop file with the same
name.

The existence of more than one PowerTalk Keychain file on the desktop has no
adverse effect. This file is merely a template for display of the Keychain
information, and you will find that the duplicates contain identical
information.

To remove the duplicate, just drag it to the Trash icon and empty the trash.

Article Change History:
14 Dec 1994 - Added information stored in the PowerTalk Setup Preferences
              file.
