Direct Dialup 1.1.1 Extension (2/95)

Article Created: 13 February 1995

TOPIC -----

This article describes the Direct Dialup 1.1.1 extension and where to get it.

DISCUSSION -----

The Direct Dialup extension, version 1.1.1 is intended only for users who already have PowerTalk Direct Dialup 1.1 installed. Version 1.1 is a System 7.5 version only, it is not supported on System 7 Pro (7.1.1).

If you send large messages or enclosures via PowerTalk Direct Dialup Mail 1.1, you may encounter a known problem. Direct Dialup 1.1 will begin sending the letter, but it will disconnect before completing the letter. The letter will not appear in the recipients In Tray. Direct Dialup 1.1 will retry sending the letter according to the parameters set in the Direct Dialup 1.1 key in the Key Chain, without success. The letter will then be marked as "Done" in the Out Tray and you will receive a Non-Delivery Report in the In Tray. This problem has been corrected in version 1.1.1 of the Direct Dialup extension.

To use, download, double-click the downloaded file (this decompresses it). Drag the Direct Dialup extension on top of your System Folder and it will be automatically placed in your extensions folder.
