PowerTalk/PowerShare, Digital Signatures, & IP Gateways (5/95)

Article Created: 1 May 1995

TOPIC ---

An AppleMail message can be signed using the RSA digital signature and sent to
other users through PowerTalk or PowerShare with no problem. However, the same
message sent through an IP Gateway and back into PowerTalk from the Internet
loses its signature.

DISCUSSION --

The digital signature information is included in the header of a file. This
header information cannot be properly handled by external mail systems and is
stripped when forwarded through a gateway.

A workaround is to send signed files as AppleMail enclosures.
