PowerTalk Aware Applications in Startup Items Folder (5/95)

Article Created: 19 May 1995

TOPIC ---

My PowerTalk aware applications do not recognize PowerTalk when they launch from
the Startup Items folder at start up. Usually, the mail option is disabled or
an error message appears saying PowerTalk is not available. Quitting the
application and launching it again resolves this, but why don't the applications
work with PowerTalk when launched at start up?

DISCUSSION ---

Applications launched from the Startup Items folder may not find PowerTalk
available because at start up, the Finder launches PowerTalk after the items in
the Startup Items folder start. When the applications look for PowerTalk while
starting up, PowerTalk is not available. You can either quit and then launch the
applications again, or launch the applications after the computer has finished
its start up process.
