PowerShare 1.1: What Is New (10/95)

Article Created: 13 October 1995

TOPIC -----

What's new in PowerShare 1.1?

DISCUSSION -----

PowerShare 1.1 includes better support for Internet-style addresses, including the ability to import Internet addresses from a text file into the PowerShare catalog. PowerShare 1.1 allows administrators to import more types of data directly into the PowerShare catalog, improved performance in message routing and more information in the log windows. All of these features make PowerShare 1.1 easier to support and easier to integrate into an SMTP-based environment.

The PowerShare 1.1 box also includes the Apple Migration Tool for Microsoft Mail which will transfer user-account information from a Microsoft Mail for AppleTalk Networks server to a PowerShare system. Apple has also bundled a demonstration version of the StarNine Internet gateway for PowerShare.
