## PowerTalk to MS Mail Gateway & MS Mail on Novell Server (11/95)

Article Created: 21 November 1995

TOPIC -----

We are trying to setup the Microsoft (MS) Mail Gateway 1.6 for use with PowerTalk 1.1. Our clients are Power Macintosh 7100/80 computers, the MS Mail Server is running on a Novell 4.1 Server.

The users can see the MS Mail Server in the chooser, but they cannot see the mail server in the keychain. Are there versions of PowerTalk that are not compatible with this setup, or are there problems with the MS Post Office running on a Novell 4.1 Server?

DISCUSSION -----

Your issue is in running the MS Mail Server on a Novell 4.1 Server. The MS Mail to PowerTalk gateway only connects to an MS Mail Server running on a Macintosh.
