Simware's SIMMac: No Support for Token Ring

This article last reviewed: 18 February 1991

TOPIC -----

Can you use SIMMac (from Simware) over Token Ring for 3270 host connection (IBM host), as one uses MacDFT over Token Ring?

DISCUSSION -----

SIMMac from Simware only provides synchronous and asynchronous connections via protocol converters, coaxial boards, or its own protocol conversion software. SIMMac does not support token ring or LU 6.2 connections.
