AppleShare File Server: Forcing Applications to Run Concurrently

Article Created: 3 June 1991

Article Last Reviewed:

Article Last Updated:

TOPIC -----

I tried to install a program on my AppleShare server to run concurrently. I followed the instructions (which basically were to copy it to the server folder and then restart) but cannot get it to show up on the file menu. The program is Netway 3287, which routes CMS printing to the LaserWriter. Any hints?

DISCUSSION -----

It's possible to force an application to run concurrently with the AppleShare File Server, but if the application isn't already set up that way, you may run into problems. Contact CMS for the details. For contact information, search the Tech Info Library under "CMS".
